

# MONITORING SOLUTIONS

IOT FOR OIL&GAS

ISA is an **IoT company for Oil&Gas** specialised in remote monitoring solutions. Our solutions are based on data loggers that collect data and send it to ISA IoT Platform - Prognos - through **2G, 3G, LTE-M, NB-IoT, SIGFOX or LoRa** networks.

We extract more value from your logistics by **predicting your operation needs**, reducing the number of deliveries & increasing the DROP on your replenishments.

You can **access your data any time**, through our own web platform & mobile application or directly in your ERP platform.

## OUR SOLUTIONS

### SOFTWARE **Prognos**

IoT platform that supports ISA's & 3rd party solutions, providing **detailed data and KPIs**.

### HARDWARE **x.Logger**

IoT-enabled **data logger** expected to set new standards for monitoring technology.

### HARDWARE **u.Meter**

**Ultrasonic smart meter** with shut-off valve that accurately measures gas consumption.

### HARDWARE **u.Sensor**

Ultrasonic sensor specifically designed to measure the **level of Lubricant & Oil** tanks.
